

Two postdoctoral positions in string theory, the AdS/CFT correspondence and/or integrability

This is to announce two 2-year postdoctoral positions at the Institute of Physics, Jagiellonian University, Kraków, Poland. The string theory group centered around Romuald Janik pursues various research interests ranging from diverse applications of the AdS/CFT correspondence, through conformal field theories and higher-spin gravity, to integrability in gauge/string theory. We invite applications for two 2-year positions in any of the above broadly defined research areas.

The postdoctoral positions will commence on 1st October 2014. The monthly salary is expected to be equivalent to around 2000 EUR.

Candidates should send their CV, publication list and a statement of research interests to **romuald.janik@gmail.com** by **15th December 2013**. They should also arrange two (preferably three) recommendation letters to be sent to the above e-mail address within the same deadline.
